

BigCubeLift NFL settings: one task, one oracle, four label-nuisance distributions

executed corruption, chunk-held (SKEW_HOLD=8); the scripted servo corrects it (certificate = collection acceptance); 66 mm cube vs 80 mm opening leaves ± 7 mm lateral grasp slack

orange: first 12 training demos per setting (recorded = executed, servo-corrected) | green band: ± 7 mm lateral slack the grasp allows | gray: 66 mm cube | black dots: episode starts | SR = avg_mean_success@300k, mean of 2 seeds
