

Top: $\pi_{0.5}$ integrated x,y,z translation in the policy's normalized action units (dots every 5 steps). Bottom: GR1 right-wrist position from forward kinematics of state + un-normalized relative joint kinematics of state (dots every step). Equal axis scales; camera tilted off the mean-path plane.

$\pi_{0.5}$ flow, typical state (sep 3.6)
path length 90.8; tube width mean 0.57 / max 1.98

$\pi_{0.5}$ flow, widest state (sep 0.0)
path length 69.2; tube width mean 0.87 / max 4.78

$\pi_{0.5}$ flow, most separated state in 3000 (sep 257, K=32)
color = gripper-close step: step 46 (n=22), step 47 (n=10)
path length 76.9; tube width mean 0.43 / max 1.30

GR1 flow, typical state (sep 2.5)
right wrist, cm; all samples give the same hand command (channel 18)
path length 10.6; tube width mean 0.43 / max 1.63
model mean vs demo chunk: RMS 8.7, at step 0 1.9

GR1 flow, widest state (sep 0.0)
right wrist, cm; hand closes inside the chunk (channel 24)
orange: by step 4 (n=9), blue: later (n=7)
path length 14.7; tube width mean 0.86 / max 1.84
model mean vs demo chunk: RMS 11.0, at step 0 1.4

GR1 flow, most separated state in 3000 (sep 8.7, K=32)
right wrist, cm; hand channel 19 at two levels all chunk long
blue: high (n=18), orange: low (n=14)
path length 10.4; tube width mean 1.25 / max 3.72
model mean vs demo chunk: RMS 10.8, at step 0 4.6
