

Retry/regrasp toy: 40% of demos back off from a flawed first dock approach and retry (all executed, bounded, oracle 100%)

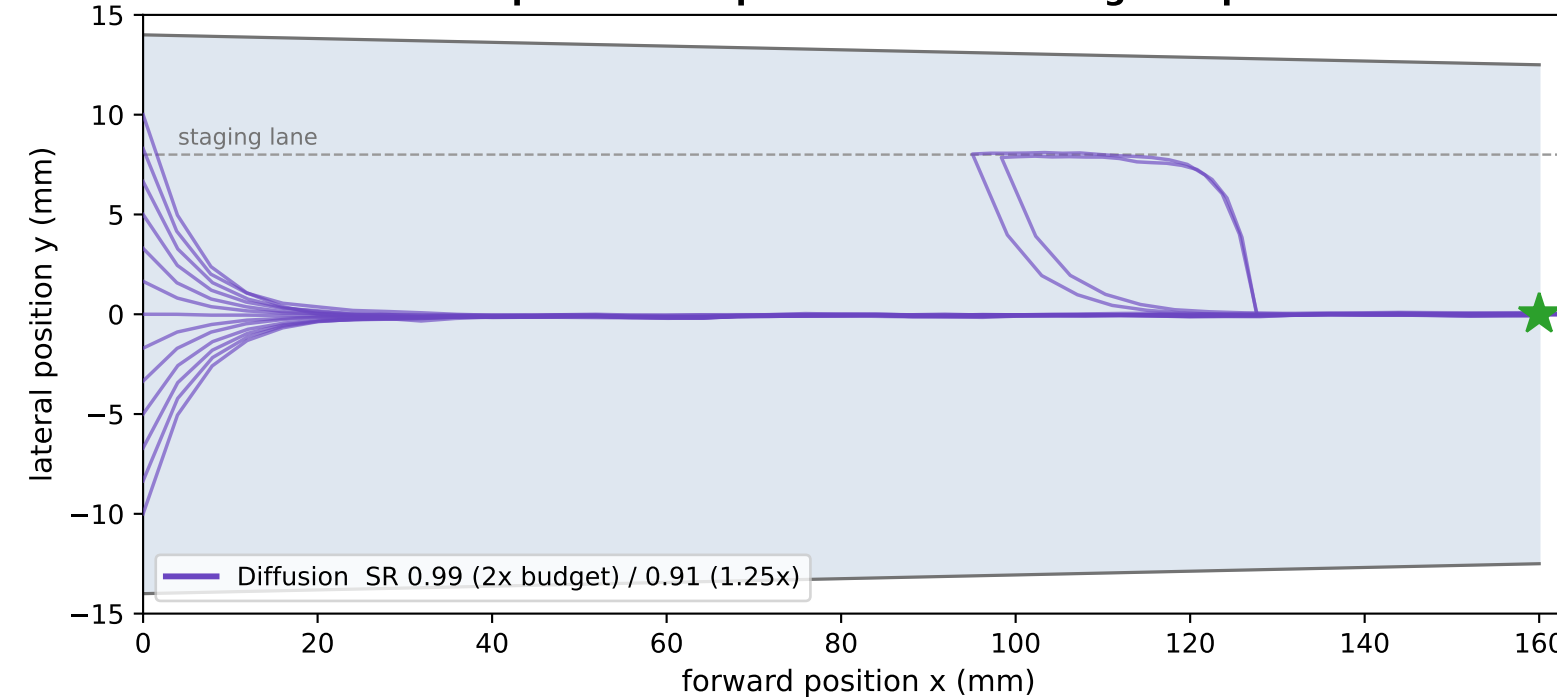

A Demonstrations: bounded regrasp — retreat, re-stage, re-approach, dock

B Mean family: blends dock and staging modes — misses the 0.5mm dock

C Diffusion: re-samples retreat per dock visit — budget-dependent

D HT: rejects the retreat cluster (mass $0.31 < 1/3$) — docks first pass
